Your Amazon EC2 for 80% Less

Spotinst provides an Application Scaling service, designed to optimize performance and costs. It enables companies of all sizes and verticals to leverage Amazon EC2 Spot Instances with confidence in order to optimize and accelerate workloads to save 80% of their compute costs.

How it Works?

Prediction is the Key.

Based on historical EC2 Spot interruption data, Spotinst can predict EC2 Spot interruptions ahead of time and automatically migrate instances into different markets or fall back to On-Demand and Reserved instances in order to ensure high availability and consistency.

2 STEPS

01 | **CREATE**
Launch clusters in seconds via AWS CloudFormation / KOPS Terraform / UI

02 | **MONITOR**
Get real-time monitoring capabilities at the instance and container level.

Compute More, Pay Less

Application Aware Automation

Spotinst Elastigroup was the nirvana we were looking for in managing our complex EC2 Kubernetes environments.

Shane Savoie,
Chief Architect

Spotinst has enabled Jobvite to expand its services, enable innovation by engineering and an ecstatic CFO after reduced spend. A true win-win situation!

John Stuart,
VP, Devops, Security & IT

I would highly recommend this platform to any company who wants to reduce their costs, and who doesn't want to reduce their costs?

Nikhil Gupta,
Technical Integration Manager
