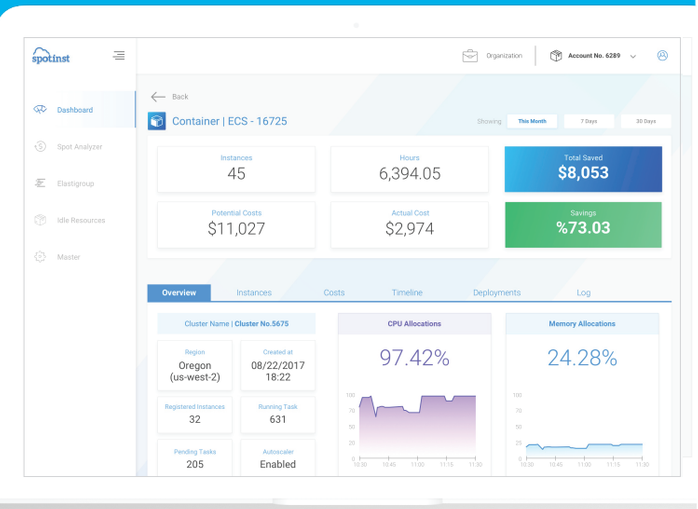
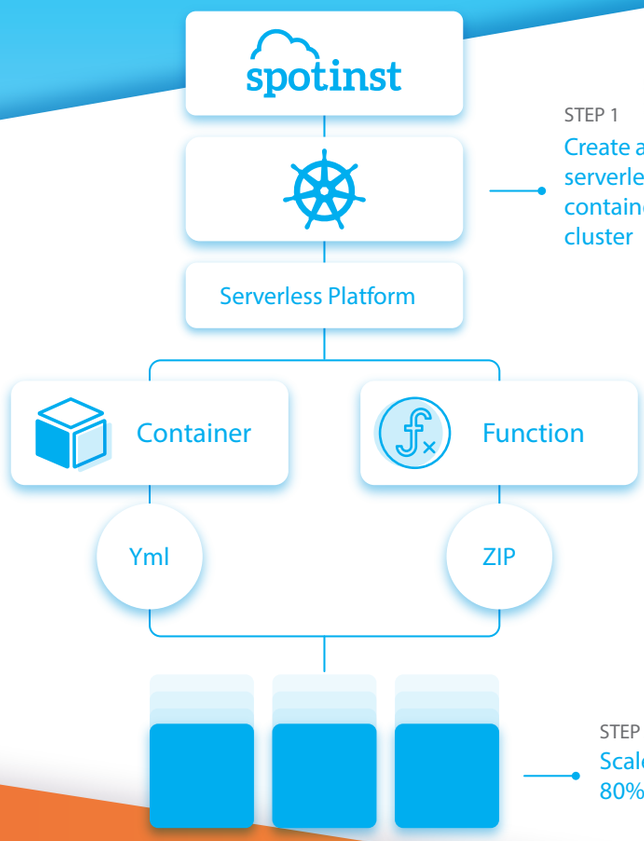
The Serverless platform for containers

Spotinst Serverless is an execution platform for containers and functions that eliminates the need to provision and manage compute resources. Built on top of the most cost efficient multi-cloud solution in the industry, companies of all sizes and verticals can build, ship and run containers with confidence while saving 80% over traditional instance based deployments.





STEP 1
Create a serverless container cluster

STEP 2
Deploy Container/ Function using K8S Yml/Zip file

STEP 3
Scale infinitely at 80% discount

Get unprecedented Visibility & Monitoring capabilities

2 STEP

01 | CREATE

Provision a managed Kubernetes service in seconds through the Spotinst console

02 | MONITOR

Configure a deployment document and execute. Spotinst takes care of the rest. Applications are instantly available and can grow to any scale.

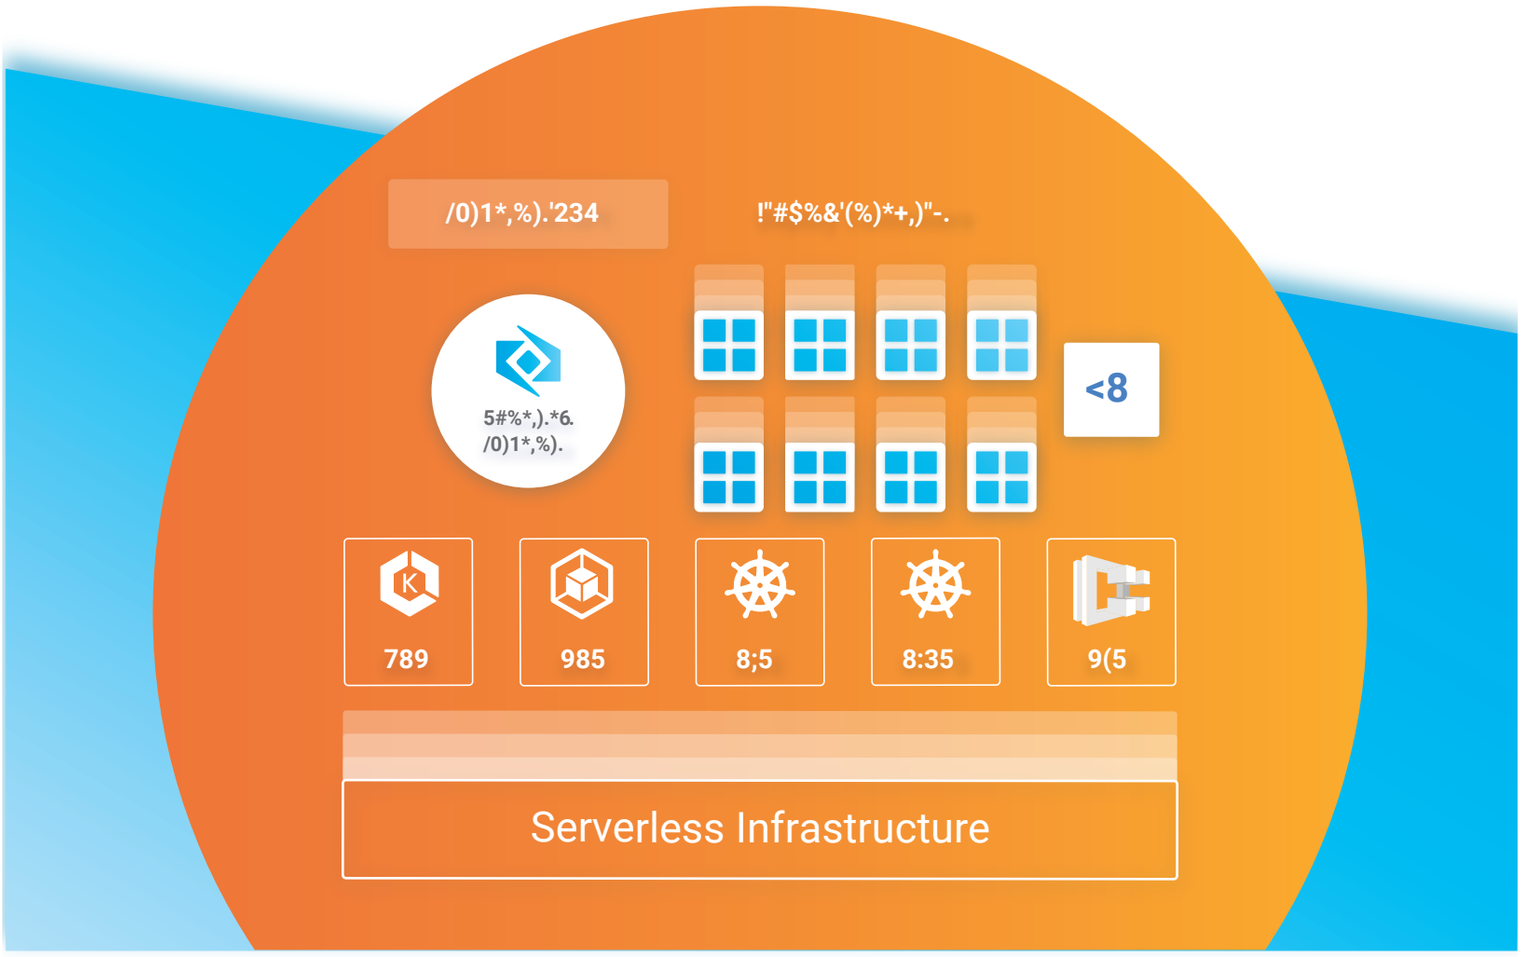
The Serverless Platform for Containers



"Spotinst Elastigroup was the nirvana we were looking for in managing our complex EC2 Kubernetes environments.

Shane Savoie,
Chief Architect
ticketmaster®

"Because it was so easy, it was a no-brainer. Demandbase now runs it's entire Container infrastructure with Spotinst

Josh Schlanger,
VP of DevOps
DEMANDBASE

"It was really an out-of-the-box solution. All we had to do was turn it on and we were done.

Glenn Poston,
SRE and DevOps Manager
